

Hello

My name is vishal vijay boraste.

I am from Dindori, Nashik, Maharashtra. My education was in 11th and 12th in science stream in my village. After that I took admission in Bachelor of Computer Science. My graduation was completed in 2021, in Bhonsala military college Nashik. In that period I met new people and learned new things in college. I know programming so I want to work in IT industry.

So I started preparing. And since I know about data science, I decided that I wanted to work in the same field of data science ... so I started preparing.

After that I came to know about Edyoda that Edyoda teaches data science very well and that is what makes you a company-made place .. so I liked it and I joined this class .. but now I have learned Python programming language, and a lot. There is something left to learn, I am fascinated to teach Python.

I want to complete the course and get a place in a good company and fulfill my and my family's dream, for which I am giving my 100%. Data science is a field where you can learn a lot. We meet every day to learn new things, and since we have been interested in computers since childhood, our next future is computer ... so I will go into IT and try to give that company how it will benefit me ..

Data science is a very new thing, this came in the past decade so this field is growing very fast these times and data science demand increases by day by day.

Thank you to Edyoda for giving us the opportunity to learn data science and many things so well and our dreams can be fulfilled.

Thank you Edyoda
